SUMMARY

Frontend Developer with 8+ years of experience building scalable web applications across enterprise environments. Specialized in Angular, TypeScript, SCSS, and RxJS, with a strong focus on clean architecture, maintainable code, and high-quality user interfaces.

Experienced in delivering solutions for complex domains including enterprise systems and secure digital platforms, working within cross-functional teams and Agile environments. Skilled in translating product requirements into structured, reusable frontend solutions and collaborating closely with designers and backend engineers.

EXPERIENCE

Independent Frontend Developer

Oct 2025 – Present

Designing and developing production-quality applications and digital products with a strong focus on real-world usability, system thinking, and scalable UI architecture, applying a product-oriented approach grounded in real usage and continuous refinement.

Project: PengPhin Adventures

- Designed and built an Angular-based memory game for children, combining playful gameplay with thoughtful UX and educational elements.
- Implemented a progression system across multiple worlds and levels with gameplay difficulty shaped by board complexity and special card mechanics such as bonus and mischief cards
- Implemented gameplay logic, scoring and hints
- Built a fully responsive experience across mobile, tablet, and desktop
- Developed component-based architecture with SCSS-driven theming
- Introduced speech interaction and bilingual support
- Incorporated real user feedback (child testing), actively refining interaction patterns, clarity, and engagement

Tech stack: Angular, TypeScript, SCSS

Project: Plantree – Smart Household Food Management App

- Designed and implemented an ecosystem connecting planning, grocery lists, pantry, and meal suggestions into a continuous loop
- Applied one-way data flow between features to ensure reliable behavior, avoid data conflicts, and reduce system complexity while maintaining feature independence
- Implemented smart pantry-based meal suggestions
- Designed a multi-user shared data model with real-time interactions, built on a space-based architecture
- Created functionality for a reusable meal system and cooking tracking
- Designed responsive UI and scalable component architecture
- Focused on clear, realistic UX decisions, continuously refined through real household usage

Tech stack: Angular, TypeScript, SCSS, Supabase

Project: Peacely — Garmin Watch Face

- Designed and developed a minimalist Garmin watch face focused on readability, simplicity, and everyday wellness metrics
- Built configurable themes, activity metrics, and 12-hour/24-hour time formats using Garmin Connect IQ settings
- Implemented a reusable theme system with custom visual assets and optimized layouts for wearable devices
- Published on the Garmin Connect IQ Store and validated functionality on a real Garmin Venu 2 Plus device
- Focused on creating a calm, distraction-free user experience with clear information hierarchy and glanceable interactions

Tech stack: Monkey C, Garmin Connect IQ SDK

Avenga (formerly Musala Soft)

Dec 2016 – Oct 2025

Project: AI Knowledge Elicitation Tool

Client: Global Professional Services Firm | Apr 2025 – Sep 2025

- Developed the React + TypeScript frontend for an AI – driven platform that conducts structured interviews and generates automation blueprints for business processes
- Contributed to solution planning, translating product ideas into technical implementation tasks
- Regularly presented development progress and product features to stakeholders, demonstrating implemented functionality and gathering feedback
- Integrated Azure authentication and Speech Services
- Built reusable components following a modular React architecture with shared services and SCSS styling aligned with Figma design specifications

Tech stack: React, TypeScript, SCSS, Azure OpenAI, Azure Speech, Azure Entra ID, Vite, Vitest

Project: Qualified Electronic Signature System

Client: Leading National Bank | Jun 2023 – Jan 2025

- Implemented business signing feature, allowing corporate clients to sign multiple documents at one session among groups of users
- Developed a graphic layer for signature placement on loaded documents allowing users to preview and drag signatures to the desired position
- Ensured high code quality by following best practices and established development standards

- Conducted code reviews to maintain consistency and improve overall team code quality
- Collaborated with business analysts and client stakeholders to gather requirements and alignment with project goals
- Participated in project discussions and stakeholder meetings, contributing ideas and progress updates
- Coordinated with QA teams to validate features, support testing and ensure delivery of a high-quality product

Tech stack: Angular, TypeScript, SCSS

Project: Gift Card Voucher System

Client: International Technology Company | Apr 2023 – Jun 2023

- Delivered Angular feature enhancements aligned with evolving product requirements and design updates
- Implemented internationalization (i18n) using BabelEdit, enabling expansion into new adding new markets
- Partnered with client stakeholders and backend teams to ensure cohesive implementation and smooth user experience

Tech stack: Angular, Angular CLI, SCSS, BabelEdit

Project: MyMusala – News & Event Management System

Client: Internal Company Project | Apr 2023 – Jun 2023

- Developed the Angular frontend for a company-wide news and events platform, enabling employees to stay informed and register for events
- Built modular and reusable components for news feeds, event cards, and event registration workflows
- Integrated Google Calendar, enabling events to be displayed in both list and custom calendar views
- Designed and styled the calendar interface to align with company branding and improve visibility of upcoming events
- Integrated backend APIs for content management and data synchronization
- Implemented search, filtering, and sorting to enhance event discoverability
- Collaborated with QA teams to validate features and ensure product quality
- Participated in Agile ceremonies (sprint planning, daily stand-ups, retrospectives), contributing to planning and continuous improvement

Teck stack: Angular, Angular CLI, TypeScript, SCSS, Google Calendar API

Project: Gift Card Voucher System

Client: International Technology Company | Nov 2022 – Jan 2023

- Contributed to the development of a gift card rewards and promotions platform, integrated with client distribution channels and supporting complex business workflows for automated digital gift card delivery across multiple platforms
- Played a key role in a full application rebranding, updating logos, color schemes, typography, and UI styling across multiple components
- Developed and enhanced Angular features, aligning implementation with evolving business requirements and updated design specifications
- Collaborated with client stakeholders and backend developers to ensure consistent implementation and a seamless user experience
- Participated in product and design discussions, contributing ideas, proposing alternatives, and presenting demos to gather stakeholder feedback

Teck stack: Angular, Angular CLI, TypeScript, SCSS

Project: Qualified Electronic Signature System

Client: Leading National Bank | Nov 2022 – Jan 2023

- Developed an Angular-based user interface enabling secure digital document signing
- Built intuitive and reusable components for document handling and signing workflows
- Ensured high code quality by following best practices and established development standards
- Conducted code reviews to maintain consistency and improve overall team code quality
- Followed technical documentation and design specifications to ensure alignment with business requirements
- Collaborated with business analysts and client stakeholders to gather requirements and maintain a shared understanding of project goals
- Participated in project discussions and stakeholder meetings, contributing ideas and progress updates
- Coordinated with QA teams to validate features and ensure delivery of a high-quality product
- Contributed to backend feature development and business logic implementation related to document processing

Teck stack: Angular, TypeScript, SCSS, Java, Spring, SQL

Project: Resource and Meeting Reservation Systems

Client: Internal Company Project | May 2017 – Dec 2018

- Contributed to an early phase of a Personal Request System built with the MEAN stack, enabling employees to request and manage company resources such as laptops and technical equipment
- Actively participated in the development of the Angular frontend for a Resource Reservation system, allowing employees to book meeting rooms across multiple office locations and invite colleagues
- Designed a grid-based interface for displaying room availability with advanced filtering by location, meeting details, and participants
- Implemented support for multiple time zones and office-specific rules to prevent booking conflicts and ensure coordination across regions
- Followed project requirements, technical documentation, and design specifications to ensure consistent implementation and alignment with internal goals
- Participated in project meetings and led regular demo sessions, presenting progress and feature updates to internal stakeholders for feedback and validation

Teck stack: Angular, Angular Material, MEAN stack (MongoDB, Express, Angular, Node.js)

Project: Smart Home Automation System

Client: Major European Telecommunications Provider | Dec 2016 – May 2017

- Joined as a Junior Frontend Developer, contributing to a home automation platform for managing and configuring smart devices
- Delivered frontend tasks under supervision while gaining familiarity with project structure and best practices
- Explored frontend frameworks and approaches, building foundational experience with production-level code
- Worked under the guidance of a team lead, receiving mentorship and progressively more complex tasks
- Participated in Agile ceremonies and collaborated with an international team, gaining early experience in distributed development environments

Teck Stack: JavaScript, Angular, TypeScript, SCSS, Vue, VSCode

Intern | Dec 2016 – May 2017

- Completed an initial internship phase, focused on hands-on learning to support future development

Teck Stack: JavaScript, Angular, TypeScript, SCSS, Vue, VSCode

SKILLS

Frontend: Angular, TypeScript, JavaScript, HTML5, CSS3, SCSS

State & Architecture: RxJS, NgRx

Tools & Workflow: Git, GitLab, Jira, Confluence, Agile / Scrum, REST APIs

UI & UX: Angular Material, Responsive design, Component design, Design Systems, Figma

Additional: React, Vue, Java, Spring, SQL, npm, Node.js, MEAN (MongoDB, Express, Angular, Node.js), VSCode, Azure

EDUCATION

MSc in Civil Engineering

University of Architecture, Civil Engineering and Geodesy, Sofia

CERTIFICATES

NgRx (with NgRx Data) – The Complete Guide (Angular 19) – Udemy

Reactive Angular Course (RxJS, Angular 19) – Udemy

Google AI Essentials – Google

Developing Front-End Apps with React – IBM

LANGUAGES

Bulgarian – Native

English – Advanced (Cambridge CAE)

German – Basic (Goethe A2)
